realise asset value

TRADE PROCESS

Myriad's Business model is focused on creating value and to change the way underperforming assets are managed.

Typically slow moving, obsolete, short dated and surplus inventories represent challenges to most business departments including; sales, marketing, finance, production and logistics.

Customer facing solutions may compromise distribution channels, pricing and margins. Whilst Company facing solutions tend to exacerbate logistics costs and are a constant reminder of 'what should have been'!

Myriad's Trade process attributes agreed values to SLOBS and realises those values through customer nominated expenses and proven processes.
